CONCLUSION

The activity was successfully conducted and our Thanks goes to the funders for the continuous support toward the less fortunate children (PWDs) to be able to build their capacity through IGPs, and the appreciation goes to the Hospital Administration for the support rendered towards the success of this activity.

Since it was school time some of the clients had reported to the far schools and it was not easy to wait so an option to replace them with other disabled children who were available was taken especially on the BGFs.
